Steps to Preserve State Electronic Records

Understand the Need
Electronic records (e-records) are more complex than paper records. They require attention to ensure they are preserved and accessible for the long-term. State government is in the information business and data is its lifeblood. Public records are public information. Records are key to the documentation of government policies, actions, and intent.

1693% growth in state and territorial electronic records between 2006-2016
445% growth in electronic versus paper records in state and territorial archives
1371.1TB of electronic government records held by states and territorial archives

Collaborate for Success
E-records management is a cross-boundary group effort—a number of state agencies need to collaborate to ensure success. Collaborative effort is key to developing and adopting best practices and sustainable models for the long-term preservation and accessibility of electronic records.

Communicate Plans and Expectations
Communicate to state electronic records creators: Employees must have information and training to ensure they correctly carry out new or existing policies and procedures. Employees should understand how to use any new technologies associated with electronic records management.

Communicate with the Public: Electronic records touch the public at all the significant points in life: vital statistics record birth and death; courts record marriages, divorces, deeds, and trusts. The public needs to be confident that the security, confidentiality, and integrity of those records are maintained.

Keep Public Business on Public Platforms
Any account that is used for state business is subject to public records laws. The accounts must be managed and archived according to public records laws. If personal social media accounts are used for government business, the content created is a public record. To simplify compliance, be sure that all public officials use official media accounts for state business. Personal accounts should be used for personal communication. Personal communications should not be made via public accounts. Likewise, it is best practice for campaign accounts and public accounts to be separate and used only for their intended purposes. Official accounts should be used for all government business that happens via social media. Keeping public records on public accounts simplifies the management and preservation of e-records, limits costly legal battles over public records, and makes long-term access of state electronic records much simpler.

Manage Email Records
Email is one of the most important electronic communication tools in the workplace, including in state government business. Identifying emails that are permanent or long-term electronic records within an email account and properly managing them for long-term use is an important responsibility. Email messages are subject to public records laws and statutes and need to be managed accordingly.

Manage Legacy Data
Electronic objects require special monitoring to maintain the evidentiary status of the records. Establishing fixity, or the property of a digital file or object being fixed or unchanged, is a critical part of confirming evidentiary status of electronic records. States must select technologies that properly manage and store electronic records, while ensuring that the inevitable obsolescence of the technology does not compromise the records’ integrity or accessibility.

Identify Records; Delete Non-records
It is critical to preserve e-records for the appropriate amount of time as specified under state law or statute and in records retention schedules and policies. State archives and records management personnel can help determine which electronic files qualify as electronic records. While laws vary from state-to-state, a record normally is a piece of information that documents an organization’s “functions, policies, decisions, procedures, operations” or other significant activities. From there, decisions can be made about whether a record can be made publicly available or produced in the event of an
open records or Freedom of Information Act request. Disposing of non-records when appropriate minimizes the amount of data that needs to be stored. When the records management schedule indicates that it is appropriate to dispose of or delete electronic records, do so in compliance with retention policies.

**Security and Risk Management**

Security and risk management are critical topics for digital preservation of state electronic records. State archives have to protect data themselves while simultaneously ensuring that third-party service providers are properly protecting data. Contracts with third-party digital preservation service providers should establish responsibility for functions that are critical to ensuring the integrity of state data including fixity checking, audits, and compliance with state government legal responsibilities.

**Implement Social Media Policies and Standards**

Social media are an important and pervasive part of modern life. Facebook, Twitter, Instagram, and other social media are where people go to get significant and timely information—including government information. Significant governance is happening via social media. Social media communications have been used in court cases and to calm the public in times of uncertainty. As a result, social media content and accounts are required to be preserved as public records. State archives and records management personnel can help determine which records have long-term value and how to preserve them. Records in social media that should be captured and preserved may include:

- Evidence of an administration’s policies, business, or mission
- Information only available on the social media site
- Official agency information
- Direct communication with the public using social media

**Dedicate Funding**

States and territories spend on average .007% of the amount of the total annual budget on all archives and records management functions, including preservation of electronic records. Ongoing resources are needed to ensure the long-term management and accessibility of state electronic records. Sustained funding and increased investment in collaborative research are key to identifying best practices and models for the long-term preservation and accessibility of electronic records.

About NASS

Founded in 1904, the National Association of Secretaries of State (NASS) is the nation’s oldest, nonpartisan professional organization for public officials. Membership is open to the 50 states, the District of Columbia and all U.S. Territories. NASS serves as a medium for the exchange of information between states and fosters cooperation in the development of public policy. The association has key initiatives in the areas of elections and voting, state business services, and state heritage/archives. Learn more about NASS at [www.nass.org](http://www.nass.org).

About CoSA

The Council of State Archivists (CoSA) is a nonprofit membership organization of the state and territorial government archives in the fifty states, five territories, and District of Columbia. Through collaborative research, education, and advocacy, CoSA provides leadership that strengthens and supports state and territorial archives in their work to preserve and provide access to government records. CoSA facilitates networking, information sharing, and project collaboration among its member organizations to help state and territorial government archives with their responsibilities for protecting the rights and historical documents of the American people. Read more at [www.statearchivists.org](http://www.statearchivists.org).

This handout is based on the National Association of State Chief Information Officers (NASCIO) and CoSA report "State Archiving in the Digital Era: A Playbook for the Preservation of Electronic Records" which can be found in its entirety at: [https://www.nascio.org/Portals/0/NASCIO_CoSA_Pub18.pdf](https://www.nascio.org/Portals/0/NASCIO_CoSA_Pub18.pdf)

Support for this publication was provided by the Institute of Museum and Library Services (IMLS) through a National Leadership Grant to the Council of State Archivists (CoSA) for Archives Collaborating and Cooperating with External Strategic Stakeholders (ACCESS), a project of the State Electronic Records Initiative (SERI).
