

Exercise 2: Mapping Policies, metadata, roles, resources to a standards-based framework

Activities and Outcomes

- For your OAIS functional entity (e.g., Ingest, Archival Storage) identify:
 - What policies do you find?
 - Which objects (SIP, AIP, DIP) are referenced?
 - What metadata is implicitly or explicitly involved?
 - What else do you see that you might want to map?
- Consider:
 - cost implications (e.g., for developing policies, capturing/generating metadata, creating packages)
 - requisite skills
 - possible tools that might be used as part of the workflow for this functional entity
 - other factors?
- Discuss
 - Scenarios, problems, or projects you might map
 - Similar approaches you are using or could use
 - How this would work for your organization
